Cohort

ENERGY COHORT

Idaho Power's Industrial Energy Efficiency Cohort is a multi-year collaborative of workshops with peers and industry experts available to participants who want to lower the cost of industrial operations through education and technical assistance.

Reduce your energy costs with low- or no-cost activities

Participants will learn proven energy efficiency strategies for the industrial sector and receive support for implementation and energy savings. Participants save an average of 6%, but savings range from 0% to 20% or more depending on the participant's commitment and the opportunities. Our goal is to help participants achieve meaningful savings without capital expenditures.

Learn from us and your peers

Coaches will provide the organizational and technical support you need to reduce energy costs at your industrial facility. Experts will share tips and strategies, but will not expect you to share proprietary information.

Together, we can help you improve your operations and maintenance practices to discover hidden energy savings. In-person site visits and remote, interactive trainings are facilitated by experienced professionals, with site-specific support provided between trainings. Remote trainings will be delivered in small blocks of time to avoid burdening Operations & Maintenance (O&M) staff. We'll also spend a day with your O&M staff to hunt for energy saving opportunities. This high-value offering is provided at no cost to qualifying Idaho Power customers.

Reduce your energy costs your way

The cohort works with you to provide the necessary focused education and tools to reduce your energy footprint without impacting safety, production or reliability. In fact, as the cohort alumni attest, plants typically run better, improve production and lower maintenance costs. Sometimes increased efficiency increases capacity. Participants can expect to spend about 5-10 hours per month.

Qualified customers

The Industrial Energy Efficiency Cohort is directed to industrial facilities, which may include but is not limited to:

- Medium Industrial
- Large Industrial
- Manufacturing
- Food Processing
- Wastewater
- Other

Program Elements

Yearly Engagement

Energy Teams

Remote Training

Optimizing Equipment

Energy Performance Tracking

On-site Support

Capital Project Development and Implementation

Terms and conditions apply. Actual savings will vary by customer's energy use, rate schedule and implemented opportunities.

Program Goals

- Help participants reduce their current energy footprint through low- or no-cost operational adjustments.
- Establish a long-term, customized strategic energy management (SEM) system for each facility.
- Educate participants on how to maintain energy savings from implemented measures over time.

What you get

- Training and development of an energy team at your facility in a series of seminars.
- An on-site energy assessment to identify opportunities for energy savings.
- Energy performance tracking models to track progress and document energy savings.
- Incentives for verified savings over the course of the cohort at a rate of \$0.025 per kilowatt-hour (kWh) saved annually up to 100% of eligible project costs.
